

In Class Activity 1: File output

Objective

This activity is to teach you how to write the output into a file.

Activity: helloWorld2

Complete the following program such that it outputs *helloWorld!* into a file named *myFile.txt*.

* used when dealing with files

* output file stream "ofstream"

```
#include <iostream>

#include <fstream>

using namespace std;

//*****

int main()
{
    ..ofstream fout;..... //create an output stream
    ..fout.open("myfile.txt");..... // connect the file to the stream

    cout << "Hello World!";
    ..fout << "Hello World";..... //output into a file to the file
    fout close();
    return 0;
}

//*****
```
